Dear Ben and the Finch team,

I am applying for the Product Manager role on the operator experience. Reading the posting, I recognized a lot of my own work, especially the question of how people check what an agent has done and decide what to do next.

This summer at IBM, I built an AI agent for the zAIOps team that pulled revenue, market and customer data together and fed a dashboard used by sales and product. Most of my time went into making its answers easy to check. People needed to see where a number came from before they would act on it, so every insight showed its source, and users could save the ones they trusted to a shared dashboard.

Before business school, I spent four years at Deloitte. On a statewide health records project, I spent time in nine hospitals watching how nurses and staff actually moved through their day, then turned what I saw into requirements and a pilot plan. I also ran delivery for a ten-person engineering team, and I have enjoyed working that closely with engineers ever since.

Right now I am at Wadanova, a pre-seed startup that handles hiring, onboarding and payroll for companies building teams abroad. I talk with customers most weeks and help ship the workflows they rely on. It is process-heavy work where a missed step lands on a real person, which is a big part of why Finch caught my attention.

I would love to talk more about the role.

Best,
Aditi Singh
